BAR ASTRONAUT'S PLANE

LONDON (Reuters) — The British government has refused permission for a Soviet airliner carrying Russian astronaut Yuri Gegarin to land at Prestwick Airport, Scotland, a foreign office spokesman said Thursday. The spokesman said permission was refused because Russia did not give Britain similar reciprocal facilities for staging an over-flying. Reports said Gagarin was on his way to Cuba to meet visiting Soviet woman cosmonaut Valentina Teroshkova.

Every Modern Aid Is Urged In Forest Industry Future

By CAL HOLLOWAY

HALIFAX (CP)—Delegates to the annual meeting of the Canadian Institute of Forestry were told here Canadian forest industries must use every technological aid if they are to improve their position in world trade.

Gordon Godwin, vice - president of woodland operations for the Ontario Paper Company Limited, at Thorold, Ont., said economic prospects for the pulp and paper industry must brighten substantially if industry output is to double by 1980.

Mr. Godwin spoke on the impact of modern technology on forestry in Canada at the opening of the four-day meeting.

He said if production is doubled by 1980, the industry's forest working force will remain about the same size it is today, but will be much superior in technical skill.

"But employment opportunities will have increased in the mills, in product transportation, in secondary industries supplying equipment and in ancillary service industries and businesses."

SAYS PROSPECTS GOOD

E. S. FeRows, of Fredericton, consultant in forestry and forest products, said there are good prospects that the wood industries of the world will be "carried along in this general forward sweep of technology," provided the industrialized countries can keep their production costs down and resist competition from other materials.

He said there are indications that the forest-based industries are investing less in research than most other resource industries, particularly in North America.

"This seems to be having a telling effect on their comparative rates of growth judged by performance over the past 30 years."

N. L. Kissick, associate professor of forestry at the university of New Brunswick, said modern technology exerts direct and indirect pressure on forest management.

He said the forest manager must direct his efforts to producing his needs from a relatively small area.

K. A. Armson, professor of forestry at the University of Toronto, said more specialists are needed in the training of foresters.

SHOULD STIMULATE

Gerard Dumaine, personnel supervisor of St. Anne Power Company of Beaupre, Que., said the key to successful training of foresters is not to spoonfeed too many answers but to stimuate suggestions and recommendations.

K. G. Fensom, of Vancouver, private forestry and wood products consutant, felt that a national forest education survey should be undertaken.

He said it should include studies of the school systems in different provinces in the context of their relationship to the kind of forestry graduate that is recruited from the province, the character of the immediate university environment and the abilities knowledge and technology.

Diem Declares Communists Losing War In S. Viet Nam

CP from AP-Reuters

SAIGON, South Viet Nam—President Ngo Dinh Diem has declared the Communist guerrillas are losing the war in South Viet Nam and stirred up the Buddhist crisis hoping to avert "inescapable defeat."

With police enforcing tight security in downtown Saigon, the president told the opening session of the new National Assembly the Vietnamese army has scored several major victories on the vital southern front—the Mekong Delta, long a guerrilla stronghold.

Diem placed much emphasis on the Buddhist situation that has put a strain on relations with the United States, which is supporting the war with 15,000 military advisers and military aid at the rate of $1,500,000 a day.

STIRS SPECULATION

The president stirred up speculation that the U.S. may be trying to force South Viet Nam to carry out reforms when he attributed a budget deficit of $129,000,000 to a reduction in U.S. economic aid.

Reuters news agency reported the U.S. economic aid to Diem's regime has come to a virtual standstill and quoted high-ranking U.S. officials here as saying Washington has not informed them why economic—as opposed to military—aid has been reduced.

Reuters said widespread reports in Saigon claimed the U.S. move was made in an attempt to pressure Diem to clean up his administration.

While Diem spoke, the progovernment Times of Viet Nam charged that the U.S. has suspended economic aid in an effort to force Diem to liberalize his authoritarian regime.

The Associated Press said reliable U.S. sources denied this.

The United States import program finances 1month's the value of $110,000,000 annually.

SAYS PROBLEM SETTLED

Diem told the assembly the country's Buddhist problem is settled and the Viet Cong Communists are facing inescapable defeat.

"Faced with the eventuality of inescapable defeat," Diem declared, "the Communist Viet Cong have attempted an ultimate manoeuvre to regain victory which is slipping beyond their reach."

The president said the manoeuvre is "what deluded opinion calls the Buddhist affair."

Diem's government repeatedly has charged that the Buddhist protest movement has been infiltrated by Communists. Buddhist leaders deny this.

Western Canadian Hens Eat From Ancient Oyster Deposits

CARDSTON, Alta. (CP) — Western Canadian hens, accustomed to dining on imported oyster shell, are being wooed by a locally-mined product.

The Alberta Oyster Shell Company, under manager Louis Reichle, has begun blasting and crushing oyster shell from a 170,000-ton deposit left from 100,000,000 years ago when Alberta was an ocean floor.

He said hens in the four western provinces gobble 12,000 tons of oyster shell annually—all of it imported from the United States.

The shell is used by poultrymen as a source of calcium so hens will produce eggs with hard shells.

Most common source of this essential chicken feed ingredient is reef oyster shells from the sea. U.S. companies dredge them up with huge clam shovels from reefs where they have built up over the centuries.

Mr. Reichle said the Cardston product is not as shiny as reef oyster shell, but the hens will take to it after a couple of days as avidly as the other kind.

The shell—in a 70-foot-thick reef, was discovered several years ago by Jack Redford of Cardston along the Belly River about 15 miles west of the town.

Mr. Redford and a partner began extracting about 150 tons a year for use by local farmers, but his market was limited because U.S.imports could undercut prices of the small operation.

Early this year Mr. Reichle, formerly of San Jose, Calif., organized Alberta Shell Oyster Company, and bought the landlocked oyster mine, after discovering that an increase in production could lower prices to compete effectively with the U.S. product.

He said the U.S. shell delivered in Calgary costs feed manufacturers $42 a ton, while he can deliver his shell to Calgary for $31 a ton.

The Reichle mine has no pithead, shaft or stopes. Chunks of shell from the fossilized deposit, which extends to the river bottom, are blasted away and crushed by a hammer mill similar to those used on farms for grinding grain.

Maritimes Flight Is Described As Swamp Run

OTTAWA (CP) — The Canadian Air Line Pilots Association did nothing here to endear itself to Donald G. Grant, a member of the royal commission on taxation.

The association was presenting a brief to the commission, and obviously wasn't aware that Mr. Grant speaks of his native Nova Scotia with more than a smattering of pride.

Association lawyer A.D. McAlpine of Toronto was explaining that airline pilots have a wide variety of pleasures and problems—while one might get a popular Toronto - Vancouver run, another might be "on what's known as the swamp run."

The swamp?

Mr. McAlpine explained that this, in pilots' language, applied to the Maritimes.

With the precision of the Canadian guards, all commission eyes snapped sharply to the right—to the Nova Scotia member.

"He's not doing his case any good," Mr. Grant said dryly.

FAST FOR THEM

Antarctica's glaciers often move at the unusually swift pace of 600 yards a year, says the National Geographic Society.

Yesterday's Answer

DAILY CRYPTOQUOTE — Here's how to work it:

A X Y D L B A A X R
is L O N G F E L L O W

One letter simply stands for another. In this sample A is used for the three L's, X for the two O's, etc. Single letters, apostrophies, the length and formation of the words are all hints. Each day the code letters are different.

CONTRACT BRIDGE

By B. JAY BECKER

QUIZ

Your partner deals and bids One Diamond, next player passes, neither side vulnerable. What would you now bid with each of the following five hands?

1. ♠KQ72 ♥K974 ♦62 ♣953
2. ♠95 ♥KJ63 ♦AQ752 ♣84
3. ♠98643 ♥AK72 ♦— ♣AKQ5
4. ♠A8 ♥AK93 ♦K84 ♣QJ962
5. ♠KJ7 ♥AQ6 ♦J83 ♣AQ85

1. One heart. It is better to respond a heart than a spade, even though normally the higher ranking of two touching suits is bid first. The reason for the exception in this case is that the intention is to bid only one and then retire from the auction.

The disadvantage of a spade response is that a heart fit, if it exists, may never be found. The heart response provides the opportunity of finding a fit quickly in either suit, since it leaves room for a spade bid by the opener. It would be wrong to respond in notrump, since the first aim should be to seek a major suit fit.

2. One heart. The principle of seeking a major suit fit applies here also, even though a fit in diamonds is already established. The best contract may yet prove to be three notrump, and it might well be that the heart response will enable partner to undertake that contract. At the worst, there is no assurance of game anywhere, but the combination of a heart response now and a diamond raise later could lead the way to the best contract.

3. One spade. This is a good hand opposite an opening bid and a game in some contract will surely be undertaken eventually, but where the game ties is—at this point uncertain. In such cases the best thing to do is to bid the suits in natural order and hope to find a trump fit along the way. The spades are named first because they constitute the longest suit. Their quantity takes precedence over their quality.

4. Two clubs. The final contract is in doubt here also, but at least a game contract will have to be reached eventually. The plan is to bid clubs first and then to show diamond support as the best way to identify the spade shortage. This is as good a picture of the distribution and high-card values as can be drawn.

5. Three notrump. The best way to represent this hand is to do it all in one motion by jumping to three notrump. This shows 16 or 17 high- card points, notrump distribution and strength in the unbid suits. The response of three notrump is by no means a closing bid. It invites partner to go on with values above a minimum opening bid.
