Scientists Said On Trail Of Drug With Cancer Curing Probabilities

By ALTON BLAKESLEE
Associated Press Science Writer

NEW YORK (AP)—The drug that can cure cancer is probably already known.

It is one among about 1,000,000 known organic chemicals whose formulas have been worked out over the years. Chemistry cookbooks tell how to make them again.

But the situation is like having a million keys to a lock and, worse yet, no clear conception of what the lock looks like.

Laborious trial-and-error testing of thousands of chemicals against animal cancers has turned up a couple dozen drugs which do or may act against human cancers. They kill or poison cancer cells, but unhappily not without some similar effects upon healthy cells, or they have other drawbacks.

Now scientists are on the trail of new methods toward finding the effective key or keys. The lock, they believe, involves a "wayward gene" directing cells to follow an abnormal destiny.

A curative drug might act in any of several ways.

MIGHT BLOCK ACTION

It might block the wayward gene from action, like a football guard taking out a would-be tackler.

Or it might unscramble the scrambled message carried in the DNA of the responsible gene. Genes are composed of DNA or deoxyribonucleic acid found into long strands or strings.

Or a curative drug might interfere with RNA, another nucleic acid which acts as a messenger carrying the DNA code from the DNA molecule to factories in the cell which all the proteins and enzymes and stuff of life of a cell are made.

It might act to put the correct message back into the cell machinery, in place of the cancer message.

Or, as Dr. Aaron Bendich of Sloan - Kettering Institute remarks, the trouble in cancer might be that the genes or segments of DNA in a chromosome are rearranged. If DNA plays out its instructions in sequence, like a tape recorder, in cancer the tape recorder might be starting at the wrong point. A chemical agent might be found to put the messages back into the proper order.

CHEMICALS MAY BE FOUND

As the elaborate mechanisms of cell behavior become clearer, then specific chemicals might be found, or tailored, to right the wrong steps taken in the cancer cell. It would well be a chemical first formulated many years ago, with its capability still unknown.

A few drugs winning some benefits against cancers are known to act in this fashion. An antibiotic, actinomycin D, apparently combines with a specific part of the DNA thus interfering with transcription of the genetic message, Dr. Bendich explains. But it probably acts against all DNA, not just that of cancer cells.

And a newer class of drugs, the hydroxyl amines, invades cells to chop the DNA strands just at certain places.

Dr. Bendich thinks they hit at punctuation points, the periods and commas separating the genes or bits of DNA in the whole strand making up a chromosome. Changes in the shape of the chromosome, caused by these drugs, can be seen under the microscope.

The separate messages carried by each gene are not lost. But the sequence is rearranged. This can be fatal to a cell, or might give it its cancer quality Feed - back controls that take part in sequential action of separate genes may be lost or upset.

DRUG NEEDED

If this is the mechanism then a drug is needed that would straighten out the tape recorder sequence of the cancer cell.

So it goes, in the laboratory, part of the drama of human intellect against cancer.

It is waged also in the hospital and clinic, with growing optimism. Now through research and clinical knowledge, "cancer is becoming a manageable disease," says Chicago's Dr Charles Huggins.

"Only in a few instances now should we say that cancer is a hopeless disease," says Dr James T. Grace Jr. of Roswell Park in Buffalo. "There is always practically something that can be done to add to comfort. We can add life to a person's time, not just time to his life."

THREE WEAPONS USED

The weapons are three—surgery, radiation and drugs now in increasing number.

Dr. Sidney Farber of Children's Hospital in Boston, a famous pioneer in chemotherapy or drug treatment of cancer, declares: "I don't believe we have yet begun to see the great returns we are going to see from chemotherapy."

He has battled particularly against acute leukemia in children, witnessing, as others have, an extension of some months of healthy life, and perhaps a rare and occasional cure.

Drugs have produced apparent cures in choriocarcinoma, a rare disease of the uterus in women, and in wilms' tumor of the kidneys in children.

Based on growing clinical experience, drugs are being used with increasing benefit in tandem, or simultaneously, taking aim on the wayward gene and its effects, sometimes with ingenious techniques of administration.

The bidding:

East	South	West	North
Pass	1♠	2♦	2♠
3♦	4♠		

Opening lead—ace of clubs.

Israel had its big moment of glory during the 1964 World Bridge Olympiad when their team defeated Italy 5 victory points to 2.

The accompanying hand contributed heavily to the unexpected win. Itzhak Ellenberg and Louis Rozeanu were respectively North - South for Israel and quickly arrived at four spades. Had the Italian West led a diamond, Rozeanu would have made four spades with ease.

But the Italian West led the ace of clubs and, receiving the six from partner, continued with a club. East took the king and returned the three, which West ruffed.

West could have beaten the contract at this point by cashing the ace of hearts, but he had no idea that South had two clubs left. Declarer had cleverly played the 8-9-Q of clubs on the first three tricks and had concealed the 4-2.

West played a diamond at trick four and it was curtains for the defense. Rozeanu drew trumps, discarded two hearts from dummy on the 4-2 of clubs, and made four spades. No doubt many players holding the West hand would have fallen into the same trap, thinking there was no urgency about cashing the ace of hearts.

When the hand was played at the second table, with an Italian pair now North- South, the bidding went:

INSERT BIDDING

Playing the Neapolitan Club, South's opening bid showed at least 17 high - card points. North's two spade response showed at least a five-card suit and at the same time denied possession of an ace or a king.

East led a low heart and West won the jack with the ace. Knowing that East had the king of clubs, West led the ace and another club, East a club ruff, and North went down one.

Israel gained 470 points on the deal.

Yesterday's Answer

DAILY CRYPTOQUOTE — Here's how to work it:

A X Y D L B A A X R
is L O N G F E L L O W

One letter simply stands for another. In this sample A is used for the three L's, X for the two O's, etc. Single letters, apostrophies, the length and formation of the words are all hints. Each day the code letters are different.

A Cryptogram Quotation

O W M X T M M W E Z : H L A S K E O E Y X E Z Y W U L W Z F E S K A U M W Z S K A W U A U E U M . — H L P U E M A P W A U X A

Yesterday's Cryptoquote: HAPPINESS FOR ME IS LARGELY A MATTER OF DIGESTION.—LIN YUTANG
