There is Nothing

like pleasing customers. That's what we are doing all the time, we give them such value for their money that they come back again and bring others with them. This is the keynote of our success. We strive to please everyone who leaves an order with us. Why not give us your next order and be thoroughly convinced what we say is true.

We solicit your valued orders.

Of Special Interest to our Farmers

Shying Horses.

Shying is one of the most frequent causes of carriage accidents, yet with a correct knowledge of why a horse shies and the proper use of the reins, the shying may be partially cured, accidents often averted. A horse shies from fear, and while keeping its eyes fixed on the cause of its terror, moves away from it as much as he can. The common practice of the drivers is to keep pulling the rein on the side he shies on. The consequence is, he runs you into danger he does not see—perhaps into a ditch, up a bank, or against some obstacle that overthrows your vehicle. You blame the horse, when you yourself have caused the accident by pulling his head towards the thing he shies at. A good driver always shies before his horse—that is, by noticing the prick of the ears of his horse, or by some previous acquaintance about his failing. The driver gives light but continuous snatches to the rein opposite to the side at which it is expected to shy; the horse feels that he is being pulled away from the source of terror, and passes without shying in most cases. Learners of driving, and those who wish to correct a bad habit with their horses, have only to try once or twice to be assured of the soundness of this advice.—Farmer's Advocate.

The Outlook for Clover Seed.

Red clover seed is likely to be very high before spring opens up. The American and Canadian crop is of fine quality, but the yield is a very poor one. The English crop is of fine quality, but the yield is very disappointing averaging only 1 1/2 to 2 cwt. per acre, and it is clear that Great Britain will have to import largely from somewhere. The French crop is short, and Germany and Belgium will be buyers and not sellers, Russia will be able to spare a little, but it will not be much, as the drought last spring injured the clover plant in many districts. It is estimated that Europe will need from 100,000 to 150,000 bags of red clover seed next season, and it is very doubtful if America will be able to supply one-half of this quantity.

While clover seed is a fair crop in most producing countries, but really fine qualities are reported scarce. Alsike is a poor crop all over Europe, but American and Canadian seed of fine quality is evidently plentiful as it is obtainable at low prices.—Farming.

Get Rid of Filthy Hog-Pens.

Whoever would raise hogs without disease (and this is necessary to obtain the highest profit) must get rid of the notion that the hog is naturally a filthy animal; that filth is less distasteful and unhealthful to him than to the steer or horse, and that it is impossible because of the nature of the animal to surround the hog with sanitary conditions. Filth is a prolific source of disease among all animals; and because the hog is brought into contact with the most filth there is the most disease among swine. Filth opposes the health and thrift of swine just as it opposes the health of horse or man. The first step in growing hogs without disease is to keep filth away from them, to give them clean food, clean drink, clean quarters, clean shelter.—Farming.

How to Select a Dairy Cow.

- First see that she is of the breed you desire.
- Second see that she is in good health and has apparently strong constitution.
- Third to see her udder and teats and dairy shape.
- Fourth, ascertain the amount of milk she is giving, and if she is a regular breeder.
- Fifth analyze her milk by the Babcock test.
- Sixth churn her milk into butter and

don't forget to inquire if she is a persistent milker.—Exchange.

H. W. Collingwood says that we may have lime in our flour, lard in our butter, peanut shells in our coffee, sawdust in our tea, basswood in our hams, and sand in our sugar, but the eggs cannot be successfully counterfeited. Our little friend, the hen, with her marvellous inside fixtures, will still continue at the old stand, putting her humble grist together, and shelling out this most miraculous of animal product—the egg.

For doing their very best laying pens ought not to contain more than half a dozen pullets. The same individuals should be kept together all the time in order to avoid fighting and disturbance which follows the introduction of strangers. Any kind of discomfort and disquiet means loss of eggs

An exchange says to estimate the weight of cattle by measurement, measure the girth close behind the shoulder and the length from the fore-part of the shoulder blade along the back to the bone at the tail, which is in a vertical line with the buttock, both in feet. Multiply the square of the girth, expressed in feet, by five times the length, and divide the product by 21, the quotient is the weight, nearly, of the four quarters in imperial stones of 14 lbs., avoirdupois. When the cattle are very fat the four quarters will be about one-tenth more, while in very lean cattle they will be one-twentieth less than the weight obtained by the rule.

DR. A. W. CHASE EXPERIMENTING ON HIS REMEDIES.

HALF ROUND THE WORLD

Distance no Barrier in Getting the Glad News of His Delight to His Friends.

DR. CHASE'S CATARRH CURE A UNIVERSAL REMEDY.

Gentlemen:—Please find enclosed \$1, for which send four boxes of Dr. Chase's Catarrh Cure. We have used it, and find it an excellent remedy, so we recommend it to others. Mr. J. M. Poorman, of Woodburn, Marion Co., Ore., got some and is delighted with its effects.

Please send three boxes to Mrs. F. J. Edmunds, No. 401 West Part street, Portland, Ore., and one box to Rev. E. F. Edmunds, Sedro, Skagit Co., Wash. Be sure and send the blowers; they are so handy. Send at once. F. J. EDMUNDS.

ARE YOUR

Artificial Teeth....

Giving Satisfaction

Many persons who are compelled to wear Artificial Teeth on Plates, find that the Rubber or Vulcanite plate causes heating of the mouth, bad taste, shrinkage of the gum etc, finally causing the plate to get loose. Sometimes sore lips, sore mouths and sore throats are caused directly from the wearing of a rubber or Vulcanite plate. While it is true that a majority of persons can wear rubber or vulcanite plates with satisfaction, yet it is a fact that a large percentage the same material is poisonous.

We have seen many cases where people who had rubber or vulcanite plates were continually suffering from the above causes, and came to us for relief. In case of that kind we always recommend a metal plate, either of

Gold, Platinum, Aluminium

Our reason for recommending a metal plate is that it is a conductor of heat and cold, thereby keeping the mouth cool, and it is non irritating, and is thinner, lighter and stronger than any other plate. It is clean in every particular, and is enjoyment to the wearer. You can have your impression taken and have a Gold, Platinum or Aluminium plate made same day, fully guaranteed because we make them ourselves and know all about the material used. We also make the famous THURLO PLATE noted for its thinness, coolness and durability.

We would like you to call and see specimens of all our different lines of work including our Continuous Gum Plates—the very finest plate work known to Dental Science. Every piece of work done by us must give entire satisfaction to the patient else we will not allow it to leave our office.

Examinations free.
