MACK'S MAGNETIC MEDICINE.

Brain and Nerve Food
Is a Sure, Prompt and Effectual Remedy for Nervousness in ALL its stages, Weak Memory, Loss of
Brain Power, Sexual Prostration, Night Sweats,
Supernaturalness, Sensual Weakness, and General
Loss of Power. It repels Venereal Waste, Rejuvenates
the Jaded System, Strengthens the Enfeebled
Brain and Restores Surprising Force and Vigor to the
Exhausted Genitive Organs. The experience of
thousands proves it an INVALUABLE REMEDY. The
Medicine is pleasant to the taste, and each box contains
sufficient for two weeks' medication, and is the
cheapest and best. Full particulars in our
pamphlet, which we desire to mail free to any address.
Mack's Magnetic Medicine is sold by Drug-
gists at 50 cts. per box, or 12 boxes for \$5.00, or will
be mailed free of postage, on receipt of the money, by
directing.

THE DAILY EXAMINER
JUNE 22, 1882.

A Visit to the Emerald Isle of
America.

Leaving Pictou by steamer at 2 o'clock,
p. m., we arrived in Charlottetown about 6
o'clock, same day.

The day was just as fine as you could
wish for, a beautiful sunshine, with the air
cool enough to be bracing our number on
board being limited, we were not put to
any inconvenience with regard to having
more than ample accommodation.

The garb of nature has done much to
beautify and adorn this fertile isle. The
 verdure of the richest hue, and the forma-
tion rather undulating, present to the lover
of nature, a scene at once both pleasing and
attractive, and, if not for the long winter
might be called the Garden of the World.
The farms, though small, are in the high-
est state of cultivation, and a drive through
the surrounding country will well repay
the tourist; nature has done much for this
fertile spot, and although not discovered by
Columbus or Robinson Crusoe, should not
be overlooked.

Your Stock Farm, most pleasantly
situated on the banks of East River, must
be admired by the many visitors who wend
their way in that direction, to look at your
fine stock, which has for past years been
held in such wide repute, and, there is per-
haps, not any place of the same acreage,
where the Government have done so much
and shown the same interest to develop and
enrich the country, not only in theory, but
also in practice. The new buildings, sym-
metrical, large and airy, and are well adapted
for such purposes, in every way most con-
ducive to the health of the animals, whose
happy lot it may be to come under such
care.

Most of the stock were at pasture, and
time being limited did not permit of my
seeing them all.

The Short-horn bulls were first brought
to notice, and to an expert might lack a
few points, but these are overcome by
many, and none more so than the color of
the horn, which at once shows that they
are of a milking family, and this every
breeder should strive to get into his herd.
How can you expect a good calf if
the mother is a poor milker, and it never
pays to give a calf the milk of two cows,
but such has been the case with the ma-
jority of Short-horns.

Mr. Thornton, one of the most successful
breeders of Short-horns in England, would
never purchase a bull for his herd, until
such times as he had seen, not only the
dam and grand dam on both sides, and this
to protect himself from getting into non-
milkers.

On one occasion, having the offer of an
animal of undoubted pedigree at a reason-
able price, was about to purchase, when he
asked to see the dam, which was shown.
He at once declared he would not have the
animal in his herd for £1,000, and this
from the fact that his dam was a non-
milker. I consider the bulls good
specimens of the Short-horn. My attention
was next drawn to the young calves, and a
more promising lot can rarely be seen in
one pen—good heads, and backs, and the
tails well set on. Pigs were next on the
programme; in these, three distinct breeds
were brought to notice—Berkshire, White
York and Poland China, any of which
make a most excellent cross on native
stock, although I am much in favor of
Berks or White Yorks, being fond of a good
head and ear, chest with ample room
wherein the lungs may play, the chine
running well into the back, with a good
rib and hams; and in these breeds you can
generally find those points. Your Island
cannot be called good sheep pasture, not
rigged enough, and sheep want a hilly
country to do well. The breeds on the
farm are well chosen for the climate; short
farms are well chosen for the climate; short
wooly friends; and in the Shropshire
you have a good size, hardy, and well-
wooled species of our wool producers—a
good marketable sheep in every sense of
the word. Horses, for which your Island
has been so long prominent among foreign
buyers, was next asked for, but my in-
formation told me there was not any on the
farm only the working horses—Barrister,
your latest importation, having been sold
to J. D. McLeod Esq., and is most com-
fortably stabled in town. The impression
made from my visit was that the Govern-
ment must have the interest of the
people at heart or they never would have
branched out into such a beneficial industry.
In this the average farmer cannot fail to
receive a lesson, better than theory, of
the ordinary mind, is practice. Your
stock exhibited last season at Halifax and
elsewhere should only be a stimulus for
your greater effort; until the name of
Prince Edward Island shall resound and
the echo shall be heard through the show
yards of this, your vast Dominion, and this
from your past success.

H. Longworth, Esq., whom I also visited,
was kind enough to show me his sheep; of
course this has been a most severe winter,
and none have suffered more from it than
our wool producers; his flock cannot be
called pure, but I was shown some fine
grades, and a few pure bloods, and all good
specimens, showing what a little pains will
do. I was also shown a colt from Barrister
by the same gentleman; one of those good
headed, bright eyed, and well formed little
fellows, you could not pass on the road
without looking at him. Having still some
time on hand I called upon Mr. McLeod
to see Barrister, and it was with surprise
I looked upon this horse, and wondered
how he ever came to be brought across
the Atlantic. His breeding cannot be sur-
passed, the best strains of the blood flowing
through his veins in past generations; and
from these facts alone he cannot fail to be
a most prepotent sire, and transmit
his own inestimable qualities to his
stock—better feet and legs cannot
be found on a horse of this breed.

good canon bone and clean hocks
included. In the next box stall, to my
astonishment, I was presented to one of
the best bred sons of Almont, the great
sire of trotters and carriage horses. This
colt, Hernando, was brought from the stock
farm of Gen. W. T. Withers, a dapple bay,
with black points, weighing 1150 lbs., and
only three years old, and just as near per-
fection as you can get them, with
a set of underpins capable of carrying
fifteen stone at hurdles, if required. His
dam was by Cassius M. Clay. (Streaders.)
To write up the history of these horses
would occupy too much space, and only be
a useless task, as the trotters of America
to-day tingle with the blood from their
veins.

Two more prepotent sires the blue grass
region of Kentucky may never see again.
Clay is dead, but Almont ranges at large
in luxury and ease under the careful
eye of his owner. Messenger Boy is just
the pride of his owner and the picture of
health.

Star, with all his misfortunes, shows up
what good blood will do, and the marks of
Hambletonian are clearly depicted in him.
Royal Harry is in the best condition, with
an eye and ear as bright as a thoroughbred,
and with this last my tour ended—con-
sidering the time well expended.

It cost less for a farmer to raise a well
bred horse, cow, sheep, or any other
animal than a mongrel, and the pleasure
derived in looking at them will more than
repay the money expended. It is to be
hoped the farmers may ever lend a help-
ing hand; by showing their appreciation of
the animals brought, from time to time, by
the Government and private individuals.
And the time is not far distant when the
larger stock farms will have to exert every
effort to equal the stock raised from your
unrivalled and most luxuriant pastur-
age, and in your fine buildings on the banks
of East River, the scenery along which
has left an impression never to be for-
gotten.

Hoping, Mr. Editor, you will find space
for this short letter, I now bid you, with
best wishes for future success, adieu.

ALEX. IRVINE KIRBY,
London, England.

Home Matters.

A Western agriculturist recommends a
new way of preserving fruit. It is this:
Stuff the skin of a cat until it looks like
life, then set it on the limbs of a cherry
tree, or in some natural position on the
strawberry bed; if the position is changed
every day it will effectually frighten away
birds.

Keep a cup of powdered borax on your
washstand; it will do wonders in the way
of softening the skin. If you have been work-
ing in the garden or doing things about the
house, which have tended to make your
hands rough, when you wash them dip your
fingers in the borax, and rub your hands
well with it.

A pretty mat intended for the top of a
small table is made of drab felt. The edge
is cut in sharp points; between these
points are placed soft little tassels made of
high-colored crevel. The border of the
mat is made by working with gay em-
broidery silks any pattern which suits the
fancy of the maker. The old-fashioned
cross-stitch, or some modification of the
feather-stitch, is pretty.

An appetizing salad can be made of
asparagus, and the dressing will help to
make it enjoyed after one is tired of having
it cooked in the usual way. To the country
housewife this will seem an unlikely state
of things for a long time to come. Make
a dressing of hard boiled eggs, mustard,
pepper, salt, and vinegar, a bit of butter
or a very little oil. Boil the asparagus
until it is tender, drain it thoroughly or
the water will spoil the flavour of the dress-
ing, then pour the dressing over it, or you
may put the dressing in a salad bowl, and
allow each one to add to the asparagus to
suit his own taste—N. Y. Post.

The "original and only genuine" Sally
Lynn is made thus:—One pint of sweet
milk, quarter of a pound of butter, a little
salt, a heaping teaspoonful of sugar. Put
the butter in the milk and set them on the
back part of the range, or in some warm
place where the butter will melt and the
milk not burn; then stir in flour enough to
make a dough like that for pound-cake (a
good stiff dough); when the flour is well
mixed with the milk and butter, add, beat-
ing vigorously, a tablespoonful of yeast.
Put the dough in a buttered tin basin, and
when light, bake. It will need baking
about an hour.

A CUP OF TEA.—Take a clean kettle,
never used for anything else, fill it with
fresh water, the harder the better, boil
quickly over a very hot fire, and pour as
soon as it boils upon the tea leaves fresh
from the canister. When more liquid or a
stronger infusion is desired, put the addi-
tional tea in a cup and pour fresh boiling
water on it; after it has stood a few min-
utes it may then be put in the pot to good
advantage. Tea water will not dissolve the
theine from the dry leaves of fresh tea;
only pure fresh water will do that. The
addition of tea to the nearly empty teapot
will increase the colour, but it will not
make the tea stronger in its exhilarating
quality.—Scientific American.

COOL WINDOW SHADES.—An ordinary
buff holland curtain is very much improved
by working a double line of stars in crevel
across the lower edge to form a bordering,
set at six inches apart. The bottom of
white holland curtains may be rendered
very handsome by inserting squares of
any shade; for a shade of the ordinary
width three squares are sufficient; leave a
space between each of the same width as
the square; of course, these must be put in
very neatly and with great care to be effec-
tive. Below the hem of the bottom put an
edge of the antique lace that matches the
squares. The Bamboo shades of finely split
reeds come now in very light and delicate
rolls, either with or without decorations
upon them; they are a cool and pleasant
summer shade.
