Advertisers

The home circulation is the most valuable to advertisers. THE EXAMINER reaches the homes of our citizens every evening. That accounts for our large advertising patronage.

A QUESTION OF DOLLARS!

The question that is of greater importance than any of the political questions of the day is the question of DOLLARS. We wish to say a few words on another matter which leads directly to the question of dollars. Have you made up your mind about your Spring Suit? Will it be a ready-made or a made-to-order? Have you seen the beautiful lines of Readymades we keep? Have you seen our stock of Cloths, if you wish one made to order? To those who have seen our goods—of course with them the matter is settled as to where they are going to get their Suit—we would say come along now; and to those who have not seen, we would say come and see. That done, the question as to where you are going for a Suit is settled. But come now. DONT FORGET that we also keep the newest, up-to-date Gents' Furnishing Store in the city. Our Hats and Caps are also the most fashionable in the city. We would like to have you inspect every one of our great departments. We are satisfied that for Quantity and Quality there is not their equal in the city.

McKay Woollen Company.

THE CHARLOTTETOWN DRIVING PARK. QUEEN'S BIRTHDAY RACES.

BICYCLE FOR SALE

"VICTOR," 1895, as good as new. Double tube tires, 68 gear. A bargain at \$60 cash. O-me have a look at it at

GEESSE ON A STRIKE.

They Decided Not to Fill an Order for One Thousand Dozen Eggs.

"I have been having a good deal of trouble lately with the birds on my goose ranch," said Col. Stitt-Floyd, of Wharton, Texas.

"I had an order for a thousand dozen geese eggs, and my trouble arose in trying to fill that order. It is the first time I ever attempted to market my eggs, always heretofore relying on the sale of feathers and live birds for my profit.

"As I was about to send the geese to the market, I thought I would have no trouble to get eggs enough to fill the order. Now, a hen, you know, will let you rob her nest right along, just so you leave one egg. It is supposed that a hen has no idea whatever of numbers. But this is not true of Mme. Goose, as I found out to my sorrow.

"The first two or three days we secured a big batch of fresh eggs, but after that the 'find' began to dwindle down so fast that I determined to make a personal investigation. I went down to the river bottom next day and found that instead of being attending to business the geese which were not sitting had 'flocked' and were roving about feeding, just as if they never expected to lay another egg.

"When I approached them instead of running away they all sat down and began to hiss at me.

"It was a clear case of strike, and I was at a loss to know how to settle the trouble. I tried putting half a dozen porcelain eggs in each nest, but it would not work. The geese came up, eyed them solemnly and when I was in the repair, I told the boys to put the eggs we had gathered back and see if that would break the strike.

"Well, sir, inside of two hours after the eggs were returned every goose was back on her nest, and for the next four or five days they laid a regular crop of eggs. The flock ran than there had been before in years; but I dare not undertake to fill the egg order."—Washington Star.

A Modern Hospital Ship.

The progress that has been made within the last decade in military hygiene is well exemplified in the case of the Cammand, the hospital ship fitted out by the British Government for service with the Asantee expeditionary force. The whole outside of the ship is painted white, and the wards inside are colored pale green, so as to mitigate as much as possible the effect of the direct rays of the sun and of the glare from the surface of the sea. The wards are on the upper and main decks, the upper deck being reserved for the sick, and fitted with special lighting apparatus, as well as by a steam, stand on folding feet, like ordinary bedsteads. They can then be carried into the open air, or into the operating room, which communicates with this ward through folding doors. Each bed is supplied with a little table at the patient's head, a punkah and a rope and crossbar for the patient to lean against himself. The wards are beautifully light and airy. They have large, square ports on each side, which keep out dust and glare, while permitting natural ventilation, which is assisted by a steam spray extending from the patient's head, and by a steam, stand on folding feet, like ordinary bedsteads. They can then be carried into the open air, or into the operating room, which communicates with this ward through folding doors. Each bed is supplied with a little table at the patient's head, a punkah and a rope and crossbar for the patient to lean against himself. The wards are beautifully light and airy. They have large, square ports on each side, which keep out dust and glare, while permitting natural ventilation, which is assisted by a steam spray extending from the patient's head, and by a steam, stand on folding feet, like ordinary bedsteads. They can then be carried into the open air, or into the operating room, which communicates with this ward through folding doors. Each bed is supplied with a little table at the patient's head, a punkah and a rope and crossbar for the patient to lean against himself. The wards are beautifully light and airy. They have large, square ports on each side, which keep out dust and glare, while permitting natural ventilation, which is assisted by a steam spray extending from the patient's head, and by a steam, stand on folding feet, like ordinary bedsteads.
