For full particulars as to passage rates and train service to Canadian Northwest, British Columbia, Washington, Oregon and

CALIFORNIA Also for maps and pamphlets descriptive of journey, etc., write to **A. J. HEATH,** D. P. A., C. P. R., St. John, N. B.

**GENUINE EBONY GOODS ...FOR... XMAS PRESENTS**

When debating the ever present question, "What shall I give," at this season, our line of EBONY—cloth, hair and hat brushes, mirrors, etc., will appeal to your good taste and appreciation of the useful.

Your inspection is respectfully asked. **G. F. HUTCHESON,** Jeweler and Optician, Sunnyside.

**4 Weeks 4 Prince Edward Island THEN CHRISTMAS**

We're about ready for the ANNUAL RUSH. The big shop is fast filling up with **HOLIDAY PRESENTS**

Raphael Tuck Son & Co's Xmas Calendars, Cards and Books are here now in great profusion. Boys and Girls' Own Annals and thousands of other good books. And Fancy Goods galore; the kind you DON'T see in any dry goods store. Come and see.

**Haszard & Moore** Sunnyside.

**APPLES**

175 bbls of first-class Northern Spies and Baldwins just received in stock. If you want a barrel of nice apples for house use or for retailing call and see our stock.

**MINCE MEAT**

Our stock of mince meat has just arrived. It is put up in one and two pound tins and also in ten pound pails. It is very nice stock and is put up by a good reliable firm.

**FIGS**

Our Layer Figs are very fine stock this year, being large and very juicy. The cooking figs are also very good and cheap.

**BEER & GOFF, Grocers**

**Dentistry... BY SPECIALISTS**

PAINLESS DENTISTRY by use of electricity or by the Berlin Method. MODERN DENTISTRY, crown and bridge work. (Both without pain.) ARTIFICIAL TEETH.—We make all kinds. Teeth extracted without pain.

**BERLIN DENTAL PARLORS**

**NURSING MOTHERS**

want Scott's emulsion of cod-liver oil, almost without exception. So before they get to be mothers, eating for two is no small tax, continued for months. The emulsion not only is food itself; it gives strength for digesting usual food. If the milk is scanty or poor, the emulsion increases supply and enriches quality.

We'll send you a little to try if you like. **SCOTT & BOWNE, Chemists, Toronto.**

**HOW TO COT MOST OUT OF THE COW.**

(Continued from page 3.)

mer. And the milking should be done by men; the stable and barn yard are no places for women—save when they are looking after chickens.

**THE PLACE FOR THE DOG.**

"Should a dairyman keep a dog? Yes, if the dog knows his business. His business is, however, to crawl under the barn and stay there when the cows are about. When he wants exercise he can get out on the verandah and bark at the neighbors. The less dog the more milk. Do nothing, and neglect nothing, that will make the cow uneasy.

Unless the animals are fed when they expect to be fed, and milked when they expect to be milked, they will be uneasy. To avoid the uneasiness not only feed and milk at regular hours, but in regular rotation. If you begin feeding with No. 8 one day, begin with No. 8 each succeeding day and go down the line in regular order every day. If you do this each cow will soon learn when her turn comes and she will not be uneasy, while waiting. If you jump from No. 8 to No. 4 and back again to No. 1, there will be restlessness. The same holds good in milking. If you go regularly down the line, each cow will be ready to give down when her turn comes. If you break the order, from No. 6 to No. 3, for instance, the cow will not be ready and there will be loss of milk and time. Another thing, milk quickly. Once you start keep the work humming until you get through. And milk dry. If you do not the cow will fall off in spite of you. No amount of feed will keep a cow up to her work that is not milked dry every time.

**SAME COW, SAME MILKMAN.**

"Should not the same party milk the same cow every day?" asked J. C. Sproule.

"That is important, too," answered Mr. Gould. "I have just returned from a two week's hunting trip in Muskoka and I find by reference to the milk sheets of the cows I had been in the habit of milking before going that the trip cost me more than the sum spent on ammunition and travelling expenses.

"See that the stalls are sufficiently bedded, and that they are kept clean," the speaker went on. "I have been in some dairy stables up in Western Ontario and I really wonder how makers manage to make butter at all from milk that comes from those stables. I was at one place up at Bruce County where the owner was the director of a creamery. I noticed that he was not anxious for me to visit his stables before breakfast, and I did not go until after breakfast. From the appearance of the stables then I wondered

**TEARFUL,**

Trembling, frightened, she knows not why. Between her sobs she tells her husband of her misery. It is not enough for the husband to comfort the wife in this condition, she needs help. In those early days when the shadow of maternity first begins to fall upon the woman she is often nervous, sleepless, without appetite, and full of vague fears.

The help needed by women at this crisis is fully furnished by Dr. Pierce's Favorite Prescription. It nourishes the nerves and so quiets them. It restores the appetite and induces refreshing sleep. It gives physical strength and mental buoyancy to meet the trial of motherhood, and makes the baby's advent practically painless.

"I will be very glad to say a few words for Dr. Pierce's Favorite Prescription," writes Mrs. P. S. Douglas, of Mansouville, Brome Co., Que. "During the first four months when I looked to becoming a mother I suffered very much from nausea and vomiting, and I felt so terribly sick I could scarcely eat or drink anything. I hated all kinds of food. At this time I wrote to Dr. Pierce and he told me to get his 'Favorite Prescription' and a bottle of 'Golden Medical Discovery.' I got a bottle of each and when I had taken them a few days I felt much better, and when I had taken hardly three parts of each bottle I felt well and could eat as well as any one, and could do my work without any trouble (I could not do anything before). I feel very thankful to Dr. Pierce for his medicine, and I tell all who tell me they are sick to get these medicines or write to Dr. Pierce."

Dr. Pierce's Pleasant Pellets regulate the bowels.

**TO LET.**

That centrally situated one tenement house on Prince St., next to the late Thos. Alley's, containing eight large rooms, with stable and coach house, at present occupied by Rev. H. B. Morris, who is removing from the Island. Possession given the 23rd inst. Apply to **THOMAS McQUINN,** Lower Queen Street.

what it must have been before the morning cleaning was done. Be careful of the Man—he must be clean, prompt and gentle.

**FEED ALL THE YEAR ROUND.**

"Feeding. It is not sufficient to feed in winter. Feed all the year round, winter and summer. Failure to provide for stall feeding between July and September has wrecked more dairy factories than any other cause. People keep their cows on pasture, and pasture alone, when there is not a green thing to be seen. And then they expect to get milk! Keep the cow always in a nice, thrifty condition, not fat and not poor. If the animal is poor increase the feed; if tending towards fat reduce it. Everybody prepares to feed in winter, few prepare to feed when dry weather begins in July. And yet the one is as necessary as the other. Give your cow bran even in the full flush of June grass, and for every dollar you feed in bran you will get two dollars back through the milk pail. My cattle never come to the barn without getting both bran and ensilage, and they come to the barn the year round.

"Do you feed dry bran?" asked an auditor.

"As well dry as not," answered Mr. Gould. "The cows will get plenty of moisture from the grass or silage."

"What else will make a good summer food besides silage?" asked another.

"Peas and oats, cut green," was the reply. "Sow half an acre of peas and oats as early as possible and another half ten days later. Half an acre will keep ten cows for 21 days and two plots will keep you in feed until the green corn comes.

**CHEAPEST FODDER.**

"But," the speaker continued, "I consider silage better than green corn. You get grain as well as stalk in ensilage, and if the corn is well eared 25 per cent. will go towards making milk. But unite in this thing," continued Mr. Gould earnestly. "All work together. If only a few of the men on a milk route feed in summer, they will get milk but their neighbors will not and it will not pay to send out wagons for the milk of the few good patrons. Thus poor dairy farmers, those who do not make provision for summer feeding, injure not only themselves but their neighbors as well. We can now count on a season of drouth almost every summer and we must prepare for it. I prepare for it by putting up an abundance of silage. That is the cheapest feed I can grow. I put 225 tons last season and, after allowing for everything entering into cost of production, save interest on land or rent of land, that silage just cost me \$1.03 per ton. Where will you get anything as cheap?"

"What quantity of silage do you put at a time?" asked one of those present.

"With a thousand pound cow," was the reply, "where no other roughage is used, I will give 50 pounds per day in two feeds. I do not believe in stuffing all day long," continued Mr. Gould. "I have been in the habit of giving two feeds per day, night and morning, with about four pounds of clover for dinner. This year I purpose following a somewhat different course. I had three acres in sugar beets which have given me 1,400 bushels. I intend reducing the silage by 10 lbs and feeding 4 lbs beets.

**STOCK MAKES RICH LAND.**

"You must have rich land to produce such a crop," interjected one of the factory patrons.

"My land is all rich," replied Mr. Gould, "and any other land will be rich on which dairying is properly carried on. My land was not always rich. It was in rent for 17 years and the first year I took hold of it, eight years ago (there are a little less than 100 acres on the farm), I could not keep six cows as well as I can forty now. The fertility of the land has increased just in proportion as the cattle have increased in numbers.

"Do you throw green feed to your cows in the field?" asked one.

"No, I do not," was the prompt answer. "There is a great deal of waste in that way. The first cow that comes to the food will take a bite in one place and run all over the lot before she is satisfied which is the best morsel. By half an hour's work you can cut and haul to the barn enough grain for 24 cattle, and by doing this you save the waste which occurs when feeding in the field and cattle are allowed to tramp the stuff into the ground.

**'Never Quit Certainty for Hope.'**

There are many things of which we may be absolutely certain. For instance, we know that fire consumes combustible materials and that water quenches fire. But how do we know these things? First, from the nature of the elements, fire and water, and, second, from observation and experience.

An intelligent person puts oil into a lamp, feeling absolutely certain it will burn and give light. He knows this is the nature of the oil and this is what it has done in all previous experiences. But supposing he poured into the lamp some other fluid, resembling oil in appearance, but of the nature of which he had no knowledge. There would be no certainty about the results and they might be disastrous and even fatal.

The argument is precisely the same in regard to medicines. Every intelligent reader knows that Hood's Sarsaparilla cures rheumatism or dyspepsia, scrofula or catarrh. How does he know this? Exactly the same as in the illustrations. He knows the nature of the medicine—its ingredients and their qualities have been described and explained in print over and over again. Then he knows in actual experience that Hood's Sarsaparilla does cure these diseases. He therefore takes this medicine with perfect confidence and derives from it the benefit he desired and expected.

But suppose the druggist offers to give you instead of Hood's Sarsaparilla a bottle of his own preparation. You have never heard of it before. You know nothing of its nature or effects. True, it may be cheaper, as water is cheaper than oil, but what you want, if you have scrofula, catarrh, rheumatism, dyspepsia, is a medicine that is certain to cure.

This is perfectly sound and fair reasoning, and we think it should be given honest and conscientious consideration. The proprietors of Hood's Sarsaparilla have a medicine which is unequalled in its record of cures and in its intrinsic power to cure. The testimonials of those who have taken it must convince you of this; now try it for yourself. For the sake of justice, and for your own good, see that you get just that you called for. Don't take any substitute for Hood's Sarsaparilla. "Never quit certainty for hope."
