Weak and Sickly Babies Made Well and Strong by Lactated Food.

After many years of trial in the homes of Canada and in hospitals and institutions for the young, mothers, nurses and physicians emphatically declare that Lactated Food is the best nourishment for weak and sickly babies.

Lactated Food is the most easily digested of all known foods; it is a corrective of confined bowels, a preventive of dysentery and other complaints that cut down so many of the innocents. From every section of Canada letters come from mothers testifying to the life-giving properties of Lactated Food.

Babies regularly fed on Lactated Food become happy, bright, vigorous and strong; peevishness, crossness and fretfulness are banished, and the home is made a happy resting place.

Try Lactated Food, dear mother, for your little one if it is not thriving. The use of the great food for a few weeks will work wonders for baby.

P. E. Island Railway

On and after FRIDAY, 4th June, 1897, the trains of this Railway will run daily, (Sundays excepted), as under.

The Growth of the German Navy.

The growth of the German navy since 1872 has been extraordinary. According to figures quoted in the reichstag, the increase in naval expenditure since that date has been 527 per cent. The outlay of the North German Confederation in 1870 was only £1,201,000. In 1885 that of the German empire stood at £2,119,000, while at the date of the Emperor William II's accession it was £2,700,000, which by last year had risen to £4,315,000. The proposals of the German admiralty for the present year involved an expenditure of £6,450,000, of which more than £6,000,000 has been voted by the reichstag. During the present reign—in a period, that is to say, of nine years—no less than 86 new units have been added to the fleet. But yet neither Kaiser Wilhelm nor Admiral Hollmann is satisfied. Like Oliver Twist, they are asking for more and are making it very obvious that they intend to get more. Captain Mahan's "Influence of Sea Power on History" has evidently instructed others besides ourselves.

The programme of ships to be commenced during the next four years was not, indeed, a particularly large one. It involved the construction of 4 battleships, 6 large cruisers, 6 smaller cruisers and 36 torpedo craft. What probably alarmed the reichstag was the hint that war was coming at no very distant date, and the scarcely veiled pretension to dispute with England the command of the sea. The demands, too, were suddenly put forward, and public opinion had not been fully prepared for them. The consequence was that the public and the reichstag were bewildered and refused to be rushed into a great outlay for an obscure end.—Fortnightly Review.

Antirabic Inoculations.

The Annales de l'Institut Pasteur contains M. Pottevin's annual report for 1896 on the antirabic inoculations conducted during the past year at the Paris Pasteur institute. The number of persons treated was 1,808, less than in any previous year since the institute was opened. This diminution is attributable to the fact that patients, instead of going to Paris from all parts of the country, undergo the inoculations at the institutes now established at Lille and Marseilles. Similar institutes have been founded in Algiers and Turin, districts which formerly sent considerable numbers of cases to Paris. During the ten years which have elapsed since the opening of the Paris institute, 18,645 persons have been treated there, and an interesting table is appended, showing the nationality of the patients, from which it appears that England contributed no less than 870 individuals—more than any other country—Belgium coming next, with 429.

In some of the departments of France cases of rabies have steadily diminished, thanks to the energetic measures taken by the local authorities, while in others, where less vigorous steps have been taken to guard against its dissemination, the number of cases has increased. It is the southern districts of France that, M. Pottevin tells us, "possess the sad distinction of containing the largest number of bitten persons and of paying the most dearly for disobedience to the laws of the sanitary police."—Nature.

Interest at 5,000 Per Cent.

Mexican pawnbrokers and money lenders are distinctly outdone by the English usurers whose practices are undergoing parliamentary investigation. One lady who kept a boarding house at Oxford borrowed £30, paying interest on that amount during the first month at the rate of 200 per cent. The second month she had out the debt down to £25, but the usurer raised the interest to 220 per cent, and it went on as follows, according to the official report: Twenty pounds for the third month, 300 per cent; on £15 for the fourth month, 400 per cent; on £10 for the fifth month, 600 per cent; on £5 for the sixth month, 1,200 per cent. Then 1,200 per cent was charged for other five months on a fictitious sum, as practically the whole of the £30 was paid back in six months. After this £67 was added as interest, making the interest charged at this period up to 5,000 per cent. In this case the lady fully secured the lender by depositing her plate. It is now proposed to make default penalties, fines and bonuses illegal and to reduce pawnbrokers' interest to 25 per cent a year.—Mexican Herald.

Systematic Fire Department.

Our fire department is to be commended for its excellent discipline. This was observed by a lady who lives in the east end when the old Long station burned. She was awakened by the alarm, and, seeing a great light in the sky, dressed, although more than a mile distant, and struck out for the scene of the fire. After walking about three-quarters of the distance she reached the engine house, and, seeing that the engine had not been taken out yet, she stopped to inquire what was the matter. The chief replied that they were waiting to call the roll, and some of the members had not arrived, that they never went to a fire without first calling the roll. This, he explained, was done to prevent fraud being practiced upon the city, which pays each member of the company who responds to the alarm \$1. We venture to say that there is not another fire company in the United States run so systematically as ours.—Russellville (Ky.) Herald.

A College Prank.

The class of '47 of Hamilton college had a reunion recently, and Colonel Emmons Clark of New York, one of its members, wrote a letter, in which he told how he and several other members of the class, led by Joseph R. Hawley, now Senator Hawley, stole the college bell and hid it in a stone heap a mile away. It was done to prevent the class of '48 from following the old custom of "ringing off the rust" just as they became sophomores. It was never known who perpetrated the prank.

BE SURE you get what you want when you ask for Hood's Sarsaparilla. Unequalled in Merit, Sales, Cures. There's no substitute for HOOD'S.

For your summer house.—Camp stools and chairs, folding chairs, lounging chairs camp beds, folding wire cots, cheap feather pillows and cheap mattresses, at prices that will please you.—John Newson, 161, 2w

Anæmia means "want of blood," a deficiency in the red corpuscles of the blood. Its cause is found in want of sufficient food, dyspepsia, lack of exercise or breathing impure air. With it is a natural repugnance to all fat foods. Scott's Emulsion is an easy food to get fat from and the easiest way of taking fat. It makes the blood rich in just those elements necessary to robust health, by supplying it with red corpuscles.
